Shallow model theory

Max Cotton

1 Setup

Figure 1: This model uses a single hidden layer and is known as a Shallow Neural Netwok.

- Where W1 is the array of hidden weights, initially given random values, and B1 is the array of hidden biases, initially set to zeros
- Z11 and Z12 are together in an array Z1, and is the dot product of the W1 array and the input array (X) summed with the B1 array
- All and Al2 are together in an array Al, and is sigmoid(Zl)
 - Where $sigmoid(Z) = \frac{1}{1+e^{-Z}}$
- W2 is the array of output weights, initially given random values, and B2 is the array of output biases, initially set to zeros
- Z2 is the dot product of the W2 array and A1 summed with the B2 array
- A2 is sigmoid(Z2), which is the prediction

2 Forward Propagation

For each epoch the input array consisting of a combination of a 0 and/or 1, is fed through the network to obtain a prediction A2

3 Back Propagation

- Once a prediction is obtained, you then move back through the network adjusting the weights and biases
- The "Loss" (L) (how wrong the prediction is) can be calculated with the Loss function, which calculates the average difference between the prediction (A2) and the actual value (Y), the average is found by summing the result for each prediction then dividing by the number of predictions (m). This shows how well the network is performing.
- Weights and biases are adjusted via Gradient Descent, which aims to get the minimum Loss value, with the following formula:

$$\begin{split} -\ W &= W - learningRate * \frac{\partial L}{\partial W} \\ &* \ \text{Where} \ \frac{\partial L}{\partial W2} = (\frac{1}{m})(A2 - Y) * A1 \\ &* \ \text{And} \ \frac{\partial L}{\partial W1} = X * A1 * (1 - A1) * W2 * (\frac{1}{m})(A2 - Y) \\ -\ B &= B - learningRate * \frac{\partial L}{\partial B} \\ &* \ \text{Where} \ \frac{\partial L}{\partial B2} = (\frac{1}{m})(A2 - Y) \\ &* \ \text{And} \ \frac{\partial L}{\partial B1} = A1 * (1 - A1) * W2 * (\frac{1}{m})(A2 - Y) \end{split}$$

4 Derivations for $\frac{\partial L}{\partial W^2}$, $\frac{\partial L}{\partial B^2}$ and $\frac{\partial L}{\partial W^1}$, $\frac{\partial L}{\partial B^1}$

• Functions used so far:

1.
$$Z1 = W1.X + B1$$

2.
$$A1 = \frac{1}{1+e^{-Z1}}$$

3.
$$Z2 = W2.A1 + B2$$

4.
$$A2 = \frac{1}{1+e^{-Z2}}$$

5.
$$L = -(\frac{1}{m}) * \sum (Y * log(A2) + (1 - Y) * log(1 - A2))$$

• $\frac{\partial L}{\partial W^2}$ derivation:

– By the Chain rule,
$$\frac{\partial L}{\partial W^2} = \frac{\partial L}{\partial A^2} * \frac{\partial A^2}{\partial Z^2} * \frac{\partial Z^2}{\partial W^2}$$

– Using function 5,
$$\frac{\partial L}{\partial A2}=(-\frac{1}{m})(\frac{Y-A2}{A2*(1-A2)})$$

– Using function 4,
$$\frac{\partial A2}{\partial Z^2} = A2 * (1 - A2)$$

– Using function 3,
$$\frac{\partial Z2}{\partial W2} = A1$$

$$- = > \frac{\partial L}{\partial W2} = (-\frac{1}{m})(\frac{Y - A2}{A2*(1 - A2)}) * A2*(1 - A2) * A1$$

= $(\frac{1}{m})(A2 - Y) * A1$

- $\frac{\partial L}{\partial B2}$ derivation:
 - By the Chain rule, $\frac{\partial L}{\partial B2} = \frac{\partial L}{\partial A2} * \frac{\partial A2}{\partial Z2} * \frac{\partial Z2}{\partial B2}$

- Using function 5, $\frac{\partial L}{\partial A2} = (-\frac{1}{m})(\frac{Y-A2}{A2*(1-A2)})$
- Using function 4, $\frac{\partial A2}{\partial Z^2} = A2 * (1 A2)$
- Using function 3, $\frac{\partial Z2}{\partial B2} = 1$
- $= \frac{\partial L}{\partial B^2} = \left(-\frac{1}{m}\right) \left(\frac{Y A^2}{A^2 * (1 A^2)}\right) * A^2 * (1 A^2)$ $= \left(\frac{1}{m}\right) (A^2 Y)$

• $\frac{\partial L}{\partial W1}$ derivation:

- By the Chain rule, $\frac{\partial L}{\partial W1} = \frac{\partial A1}{\partial Z1} * \frac{\partial Z1}{\partial W1} * \frac{\partial L}{\partial Z2} * \frac{\partial Z2}{\partial A1}$
- Using function 2, $\frac{\partial A1}{\partial Z1} = A1 * (1 A1)$
- Using function 1, $\frac{\partial Z1}{\partial W1} = X$
- Using $\frac{\partial L}{\partial W^2}$ derivation, $\frac{\partial L}{\partial Z^2} = (\frac{1}{m})(A^2 Y)$
- Using function 3, $\frac{\partial Z2}{\partial A1} = W2$
- $= \frac{\partial L}{\partial W^1} = X * A1 * (1 A1) * W2 * (\frac{1}{m})(A2 Y)$

• $\frac{\partial L}{\partial B1}$ derivation:

- By the Chain rule, $\frac{\partial L}{\partial B_1} = \frac{\partial A_1}{\partial Z_1} * \frac{\partial Z_1}{\partial B_1} * \frac{\partial L}{\partial Z_2} * \frac{\partial Z_2}{\partial A_1}$
- Using function 2, $\frac{\partial A1}{\partial Z1} = A1 * (1 A1)$
- Using function 1, $\frac{\partial Z1}{\partial B1} = 1$
- Using $\frac{\partial L}{\partial W^2}$ derivation, $\frac{\partial L}{\partial Z^2} = (\frac{1}{m})(A^2 Y)$
- Using function 3, $\frac{\partial Z2}{\partial A1} = W2$
- $= > \frac{\partial L}{\partial B1} = A1 * (1 A1) * W2 * (\frac{1}{m})(A2 Y)$
